

Amendments to the Claims:

Listing of Claims:

1. (Previously Presented) A method in a data processing system for user controlled selection of multimedia data streams for an event, the method comprising:

receiving a set of video streams;

receiving a set of audio streams;

selecting a subset of the set of video streams;

selecting a subset of the set of audio streams;

responsive to user input to the data processing system, selecting a plurality of video streams from the video stream subset for the event, and one or more audio streams from the audio stream subset for the event, wherein the selecting step omits ones of the video stream subset while retaining the selected plurality of video streams, and omits ones of the audio stream subset while retaining other ones of the audio stream subset; and

presenting each of the retained plurality of video streams concurrently with one another, and also concurrently with the retained other ones of the audio stream subset.

2. (Previously Presented) The method of claim 1, wherein the retained plurality of video streams are presented on a display simultaneously with one another, and the method includes altering a location in the display in which at least one video stream of the retained plurality of video streams is presented.

3. (Previously Presented) The method of claim 1, further comprising:
selecting different selected ones of the set of video streams for presentation simultaneously with one another.

4. (Previously Presented) The method of claim 1, further comprising:
selecting additional selected ones of the set of video streams for presentation simultaneously with one another.

5. (Previously Presented) The method of claim 1, further comprising:
selecting different selected ones of the set of audio streams for presentation.
6. (Previously Presented) The method of claim 1, further comprising:
selecting additional selected ones of the set of audio streams for presentation.
7. (Original) The method of claim 1 further comprising:
receiving a set of information streams including text; and
responsive to user input, selectively presenting selected ones of the set of information streams on a display.
8. (Previously Presented) The method of claim 1, wherein the set of video streams and the set of audio streams include time stamps and further comprising:
synchronizing selected ones of the video stream with selected ones of the audio stream using the time stamps.
9. (Previously Presented) The method of claim 1, wherein the set of video streams and the set of audio streams include data packets located in the video and audio data streams periodically and further comprising:
synchronizing selected ones of the video stream with selected ones of the audio stream using the data packets.
10. (Canceled)
11. (Original) The method of claim 1, wherein the data processing system is a computer.
12. (Original) The method of claim 1, wherein the data processing system is a personal digital assistant.
13. (Original) The method of claim 1, wherein the data processing system is a television.

14. (Previously Presented) A method for tailoring a multimedia presentation of an event on a computerized multimedia system comprising the steps of:

providing a set of video streams, a set of audio streams and a set of information streams for the event via a network coupled to the computerized multimedia system;

receiving video streams for presentation from the set of video streams;

receiving audio streams for presentation from the set of audio streams;

receiving information streams for presentation from the set of information streams;

responsive to user input to the data processing system, selecting a plurality of the received video streams for the event, and also selecting one or more of the received audio streams for the event;

responsive to user input, assigning each video stream of the selected plurality of video streams and the selected audio streams to respective portions of video and audio output devices; and

presenting each video stream the selected plurality of video streams concurrently with one another for the event, and also concurrently with the selected audio streams.

15. (Previously Presented) The method of claim 14, wherein the step of selecting the plurality of video streams for presentation from the set of video streams for the event is performed in the computerized multimedia system.

16. (Original) The method of claim 14, wherein the step of selecting audio streams for presentation from the set of audio streams for the event is performed in the computerized multimedia system.

17. (Original) The method as recited in claim 14, wherein the set of video streams and the set of audio streams are provided from a first source.

18. (Previously Presented) The method as recited in claim 17, further comprising:
responsive to user selection, providing additional video streams from a second source.

19. (Original) The method as recited in claim 17, further comprising:

responsive to user selection, providing a second audio stream from a second source.

20. (Original) The method as recited in claim 14, wherein the set of video streams, the set of audio streams, and the set of information streams are provided from at least two different sources.

21. (Original) The method as recited in claim 14, wherein the set of video streams, the set of audio streams, and the set of information streams is provided via a broadband network.

22. (Previously Presented) A data processing system for user controlled selection of multimedia data streams for an event, the data processing system comprising:
first receiving means for receiving a set of video streams;
second receiving means for receiving a set of audio streams;
first selecting means for selecting a subset of the set of video streams;
second selecting means for selecting a subset of the set of audio streams;
means, responsive to user input to the data processing system, for selecting a plurality of video streams from the video stream subset for the event, and one or more audio streams from the audio stream subset for the event, wherein the selecting step omits ones of the video stream subset while retaining the selected plurality of video streams, and omits ones of the audio stream subset, while retaining other ones of the selected audio stream subset; and
first presenting means for presenting each of the retained plurality of video streams concurrently with one another, and also concurrently with the retained ones of the audio stream subset.

23. (Previously Presented) The data processing system of claim 22, further comprising:
altering means for altering a location in the display in which ones of the selected video streams are presented.

24. (Previously Presented) The data processing system of claim 22, further comprising:
third selecting means for selecting different selected ones of the set of video streams presentation.

25. (Previously Presented) The data processing system of claim 22, further comprising:
third selecting means for selecting additional selected ones of the set of video streams for presentation.
26. (Previously Presented) The data processing system of claim 22, further comprising:
third selecting means for selecting different selected ones of the set of audio streams presentation.
27. (Previously Presented) The data processing system of claim 22, further comprising:
third selecting means for selecting additional selected ones of the set of audio streams presentation.
28. (Previously Presented) The data processing system of claim 22 further comprising:
third receiving means for receiving a set of information streams including text; and
second presenting means, responsive to user input, selectively for presenting selected ones of the set of information streams on a display.
29. (Previously Presented) The data processing system of claim 22, wherein the set of video streams and the set of audio streams include time stamps and further comprising:
first synchronizing means for synchronizing selected ones of the video stream with the selected ones of the audio stream using the time stamps.
30. (Previously Presented) The data processing system of claim 22, wherein the set of video streams and the set of audio streams include data packets located in the video and audio data streams periodically and further comprising:
first synchronizing means for synchronizing selected ones of the video stream with selected ones of the audio stream using the data packets.
31. (Canceled)

32. (Original) The data processing system of claim 22, wherein the data processing system is a computer.

33. (Original) The data processing system of claim 22, wherein the data processing system is a personal digital assistant.

34. (Original) The data processing system of claim 22, wherein the data processing system is a television.

35. (Previously Presented) A data processing system for tailoring a multimedia presentation of an event on a computerized multimedia system, the data processing system comprising:

first providing means for providing a set of video streams, a set of audio streams and a set of information streams for the event via a network coupled to the computerized multimedia system;

first selecting means for selecting video streams for presentation from the set of video streams;

second selecting means for selecting audio streams for presentation from the set of audio streams;

third selecting means for selecting information streams for presentation from the set of information streams;

fourth selecting means for, responsive to user input to the data processing system, selecting a plurality of the selected video streams for the event, and also selecting one or more of the selected audio streams for the event;

assigning means, responsive to user input, for assigning each video stream of the selected plurality of video streams and the selected audio streams to respective portions of video and audio output devices; and

presenting means for presenting each video stream of the selected plurality of video streams concurrently with one another, and also concurrently with the selected audio streams.

36. (Original) The data processing system of claim 35, wherein the first selecting means includes selecting video streams for presentation from the set of video streams for the event is performed in the computerized multimedia system.

37. (Original) The data processing system of claim 35, wherein the second selecting means for selecting audio streams for presentation from the set of audio streams for the event is performed in the computerized multimedia system.

38. (Original) The data processing system as recited in claim 35, wherein the set of video streams and the set of audio streams are provided from a first source.

39. (Original) The data processing system as recited in claim 38, further comprising, responsive to user selection, providing a second video stream from a second source.

40. (Previously Presented) The data processing system as recited in claim 38, further comprising:

second providing means, responsive to user selection, for providing a second audio stream from a second source.

41. (Original) The data processing system as recited in claim 35, wherein the set of video streams, the set of audio streams, and the set of information streams are provided from at least two different sources.

42. (Original) The data processing system as recited in claim 35, wherein the set of video streams, the set of audio streams, and the set of information streams is provided via a broadband network.

43. (Currently Amended) A computer program product ~~in a computer-readable medium~~ for user controlled selection of multimedia data streams for an event, the computer program product comprising:

a computer readable recordable-type data storage medium having instructions stored thereon, the instructions comprising:

first instructions for receiving a set of video streams;

second instructions for receiving a set of audio streams;

third instructions for selecting a subset of the set of video streams;

fourth instructions for selecting a subset of the set of audio streams;

fifth instructions, responsive to user input to the data processing system, for selecting a plurality of video streams from the video stream subset for the event and one or more audio streams from the audio stream subset for the event, wherein the selecting step omits ones of the video stream subset while retaining the selected plurality of video streams, and omits ones of the audio stream subset, while retaining other ones of the audio stream subset; and

sixth instructions for presenting each of the retained plurality of video streams concurrently with one another, and also concurrently with the retained other ones of the audio stream subset concurrently.

44. (Currently Amended) A computer program product ~~in a computer readable medium~~ for tailoring a multimedia presentation of an event on a computerized multimedia system comprising:

a computer readable recordable-type data storage medium having instructions stored thereon, the instructions comprising:

first instructions for providing a set of video, audio and information streams for the event via a network coupled to the computerized multimedia system;

second instructions for receiving video streams for presentation from the set of available video streams;

third instructions for receiving audio streams for presentation from the set of available audio streams;

fourth instructions for receiving information streams for presentation from the set of available information streams;

fifth instructions for, responsive to user input to the data processing system, selecting a plurality of the received video streams for the event, and also selecting one or more of the received audio streams for the event;

sixth instructions, responsive to user input, for assigning each video stream of the selected plurality of video streams and the selected audio streams to respective portions of video and audio output devices; and

seventh instructions for presenting each video stream of the selected plurality of video streams concurrently with one another for the event, and also concurrently with the selected audio streams.
